## THE WORKAHOLIC: FOR PERMANENT STRESS

If load-bearing capacity is a priority when choosing the floor, it is clear what you should choose: namely – nomen est omen – ROBUSTO. With a high-density, 12-millimetre-thick carrier plate and the Clic system, which was developed for peak loads, ROBUSTO stands for maximum resistance. Not to mention its surface, which can withstand a lot. A floor on which you can make a lot of demands without any problems and which retains its original beauty for many years even when used commercially.
